COMPUTER NETS A WAY OF COMMUNICATION BETWEEN USER AND COMPUTER

Summary

For an average person Internet means access to great amount of data. Computer networks are among many techniques which bring benefits people at all over the world. At present we cannot imagine existence of any sphere of human activity (industry, banking). The most important thing which education brings in open distance learning is the possibility to avoid model of traditional transfer of knowledge. Open distance learning allows for individual treatment of every participant — it means that every one choose when, how, in what rate and what is a matter of study. Application of open system learning brings an advantage of liquidating barriers and limitations in access to education, in which individual needs and expectations you can take into consideration.

There is already possibility to study in virtual university which offers complete program of education and al lows you to get a degree but even though I am sure that conventional and traditional methods of learning cannot be fully replaced by open distance learning system.
