THE ENGINEERS PROFESSIONAL CULTURE AND ITS PSYCHO-PEDAGOGICAL ASPECTS OF FORMING

Summary

In high technology conditions and its constant renovation in order to achieve vital success, professional and career increase, at present day high professionalism in its traditional meaning is insufficient. Integral part of it became not only knowledge, skills and habits but also value perception of expert his professional activities, his high general and professional culture. In this article were considered issues of (forming professional culture of future engineers. Unfortunately, at present day neither pedagogical theory nor real practice in high school do not give to this problem enough consideration.
